

DJANGO DEPLOYMENT UPDATE WORKFLOW

STEP 1 - MAKE CHANGES LOCALLY

Edit your code on your Mac.

If you changed models:

```
python manage.py makemigrations
```

```
python manage.py migrate
```

STEP 2 - PUSH TO GITHUB

```
git add .
```

```
git commit -m "Describe your changes"
```

```
git push origin main
```

STEP 3 - CONNECT TO THE SERVER

```
ssh -i Murad_Server_Key.pem ubuntu@13.51.166.114
```

STEP 4 - GO TO THE PROJECT FOLDER

```
cd ~/Django_exam/DjangoProject
```

STEP 5 - PULL THE LATEST CHANGES

```
git pull origin main
```

STEP 6 - ACTIVATE THE VIRTUAL ENVIRONMENT

```
cd ~/Django_exam
```

```
source env/bin/activate
```

STEP 7 - RETURN TO THE DJANGO PROJECT

```
cd ~/Django_exam/DjangoProject
```

STEP 8 - UPDATE THE DATABASE

Run this only if you changed models:

```
python manage.py migrate
```

STEP 9 - UPDATE STATIC FILES

Run this only if you changed CSS, JS, or images:

```
python manage.py collectstatic --noinput
```

STEP 10 - RESTART GUNICORN

```
sudo systemctl restart gunicorn
```

STEP 11 - VERIFY THE DEPLOYMENT

```
sudo systemctl status gunicorn
```

Open:

```
http://13.51.166.114
```

NOTES

- Run makemigrations only on your local machine.
- Push migration files to GitHub.
- On the server run migrate only.
- Restart Gunicorn after every update.
- Restart Nginx only if you changed Nginx configuration.
